Exciting Developments and Insights

By Sandeep Manoharan, CEO

I'm pleased to share significant updates from Rupeeseed.

We're implementing TLS 1.2 & 1.3 protocols to bolster security. We have developed latest mobile trading app with UI/UX along with advanced navigation features. Additionally, implementation of Delayed CFS (Credit for Sale) features on our Trading Platform in under progress. This will be rolled out soon to our brokers.

Rupeeseed actively participated in Finbridge 2024, providing us with a platform to engage with industry participants and leaders.

I am excited to share that we have integrated BSE FNO segment to ensure seamless trading experiences for our clients along with various analytics and strategies for effective trading in BSE FNO Segment.

These developments reflect our ongoing commitment to deliver innovative solutions and superior services. Thank you for your continued trust and partnership.

NSE MANDATES TLS 1.2 AND TLS 1.3 PROTOCOLS

To strengthen security during exchange file downloads, NSE has mandated the use of TLS 1.2 (with Strong Ciphers) and TLS 1.3 protocols. These protocols, ensuring secure communication between web browsers and servers, are vital for safeguarding data and enhancing communication security, aligning with industry standards.

NSE'S ENHANCED SCRIP SURVEILLANCE PROTOCOL

NSE separately sources a file for the stocks under exchange surveillance similar to BSE's method. Previously, they used to flag such stocks within its security master. Members are advised to utilize this file for comprehensive monitoring.

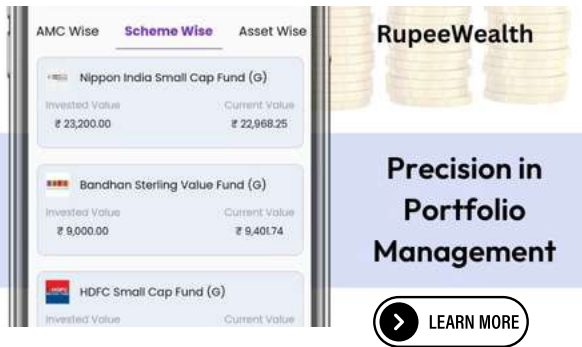

EKYC INTEGRATION SOLUTIONS

Dive into the transformative impact of eKYC integration solutions for brokers in today's digital landscape. Discover how these innovations are reshaping the industry and streamlining client onboarding processes. Read more at Today Magazine

RUPEESEED: LEADING THE WAY
